Erklärung Der Historie Des Leidens Und Sterbens Unsers Herrn Christi Jesu

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 20 pages. Original publisher: Research Triangle Park, NC: The Office ; Springfield, Va. : Available from the National Technical Information Service, 1998. OCLC Number: (OCoLC)40485617 Subject: Zeolites. Excerpt: . . . the molecular species are known. If a known diameter of molecule passes through and causes any response from the transducer, that response can be calibrated to the concentration of the known molecular species. Thus, we now have transducers that sense chemical concentration without the need for chemical reaction. Similarly, the University of Greenwich in London, England has developed a zeolite which is used as a molecular sieve that will allow passage of water molecules--but will not allow passage of VOC. This is a hydrophilic zeolite, for this is in the form of a thin membrane which must allow water molecules to adsorb desorb and thus pass through. They can grow this zeolite with a pore size of 0. 42 nanometers. They use it as a molecular sieve to remove the water from specimens without any loss of the VOC. WHAT SHOULD WE EXPECT IN THE FUTURE Now that zeolite can be formed into granules which will allow...
