(Busby et al. 1994) Risk factors evaluated are population trends, reductions in available habitat (dams, logging, mining), hatchery swamping or replacement. ESU was identified but no listing. 9. (National Research Council NRC 1995) Sources of risk are habitat loss, effects of introduced species, and overharvesting. Low population numbers puts populations at risk. Risk factors identified are random changes in demographics (age structure, sex composition, vital statistics) and environmental fluctuations, catastrophes (natural disaster), accumulation of deleterious genetic factors on reduction of low population size, loss of adaptive variation within the population, habitat fragmentation, supplementation (by which is meant hatchery swamping, not support of natural populations by artificial means). 10. (Waples 1995) Risk factors explicitly defined were: 1) loss of evolutionary legacy: loss of genetic variability which represent the reservoir for future evolutionary potential, 2) loss of genetic building blocks to preserve representative collection of components for future evolution, and 3) loss of ecological diversity. This also cites the risk factors in earlier status reviews (Waples et al. 1991b). 11. (Waknitz et al. 1995) Risk factors considered were dam and redd count-based abundance and trends in abundance. Habitat alterations were part of the preliminary considerations of risk. 12. (Weitkamp et al. 1995) Factors considered...
