

Topics in the Theory of Lifting

Filesize: 2 MB

Reviews

Extensive guideline! Its such a great go through. It is definitely basic but surprises in the 50 % of the pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Fernando Hahn)

TOPICS IN THE THEORY OF LIFTING

Springer Okt 2013, 2013. Taschenbuch. Book Condition: Neu. 229x152x11 mm. This item is printed on demand - Print on Demand Neuware - The problem as to whether or not there exists a lifting of the M^t/\cdot space corresponding to the real line and Lebesgue measure on it was first raised by A. Haar. It was solved in a paper published in 1931 [102] by L. von Neumann, who established the existence of a lifting in this case. In subsequent papers J. von Neumann and M. H. Stone [105], and later on L. Dieudonne [22], discussed various algebraic aspects and generalizations of the problem. Attempts to solve the problem as to whether or not there exists a lifting for an arbitrary M^t/\cdot space were unsuccessful for a long time, although the problem had significant connections with other branches of mathematics. Finally, in a paper published in 1958 [88], D. Maharam established, by a delicate argument, that a lifting of M^t/\cdot always exists (for an arbitrary space of a-finite mass). D. Maharam proved first the existence of a lifting of the M^t/\cdot space corresponding to a product $X = \prod_{i \in I} X_i$ and a product measure $J = \prod_{i \in I} J_i$ with $J_i = J_i^*$ for all $i \in I$. Then, she reduced the general case to this one, via an isomorphism theorem concerning homogeneous measure algebras [87], [88]. A different and more direct proof of the existence of a lifting was subsequently given by the authors in [65]. A variant of this proof is presented in chapter 4. 192 pp. Englisch.
