

Kinetic and Thermodynamic Stability of Cerium (IV) Complexes with a Series of Aliphatic Organic Compounds

By Olga Voskresenskaya

Nova Science Publishers Inc. Hardback. Book Condition: new. BRAND NEW, Kinetic and Thermodynamic Stability of Cerium (IV) Complexes with a Series of Aliphatic Organic Compounds, Olga Voskresenskaya, An approach to the investigation of the thermodynamic and kinetic stability of variable-valence metal complexes has been developed. Concepts of the generalized inverse problems of quantitative instrumental analysis and the complex formation equilibria are introduced. The procedure for this investigation is regarded as a sequential procedure for solving these two inverse problems. The classical methods for investigating the complex formations in solution are analyzed in terms of these in-verse problems. Their generalizations are given to determine together with the formation constants also redox-decomposition rate constants of variable-valence metal complexes and the rate law of numerous redox processes, for which the rate-determining step is the decay of an intermediate complex, are presented. Classification is discussed and their implementation on the examples of the study of the complexation and in-tramolecular redox decomposition of cerium(IV) hydroxo complexes with some dicarboxylic, oxycarboxylic acids and aliphatic polyatomic alcohols in dependence on acidity (pH 0.73.4) of a sulfate medium at the ionic strength $I=2$ and temperatures of 10.043.0 C by UV-Vis spectroscopy and pH measurements. The region of existence,...

Reviews

The ideal publication i ever read through. It is probably the most amazing ebook i have read. You wont really feel monotony at at any moment of your own time (that's what catalogues are for concerning should you request me).
