\*\*\*\*\*. This book had its nucleus in some lectures given by one of  
us (J. O M. B. ) in a course on electrochemistry to students of  
energy conversion at the University of Pennsyl- nia. It was there  
that he met a number of people trained in chemistry, physics,  
biology, metallurgy, and materials science, all of whom wanted  
to know something about electrochemistry. The concept of  
writing a book about electrochemistry which could be  
understood by people with very varied backgrounds was thereby  
engendered. The lectures were recorded and written up by Dr.  
Klaus Muller as a 293-page manuscript. At a later stage, A. K. N.  
R. joined the effort; it was decided to make a fresh start and to  
write a much more comprehensive text. Of methods for direct  
energy conversion, the electrochemical one is the most  
advanced and seems the most likely to become of considerable  
practical importance. Thus, conversion to electrochemically  
powered transportation systems appears to be an important  
step by means of which the difficulties of air pollution and the...
